

EXCELLENT SMILE MAKEOVER USING 3 SHAPE SMILE DESIGN SOFTWARE

WHY 3 SHAPE DIGITAL SMILE DESIGNING

Confused How Would I Look after the Treatment ?

THE ANSWER IS 3 SHAPE SMILE DESIGN SOFTWARE

Know your Smile Makeover Treatment Result before the Treatment itself

You can see your New Transformed Smile Digitally on the Screen allowing you to take your Treatment Decision More Wisely with Great Predictability and Confidence.

HOW DO WE DO 3 SHAPE DIGITAL SMILE DESIGNING

We place an extremely strong emphasis on conceptualizing, planning, and perfecting the design of your smile even before we start to work on your teeth. Our design motto is to give you the best aesthetics possible, without crossing over the forbidden line where your smile starts to look artificial.

5 Steps is what it takes to get your Dazzling Smile using our In-house 3 Shape Smile designing Software

Step 1

We first take the preoperative pics of our Patient's Front Teeth

Step 2

We Import of Preoperative Pics into our Software

Step 3

Digital Planning for Smile Makeover in 3 Shape Smile Design Software

Step 4

Assessment & Discussion on the Smile Designing Results

Step 5

Implementation the Digitally Planned Treatment Results

SMILE MAKEOVER PROCEDURES

Once Finished with the 3 Shape Digital Smile Designing, we Implement the Planned Design to provide Dazzling Smile Makeover to our Patients by various Treatment approaches depending upon the Type of Correction Required.

THERE ARE 3 WAYS FOR IMPLEMENTATION OF YOUR SMILE MAKEOVER

1

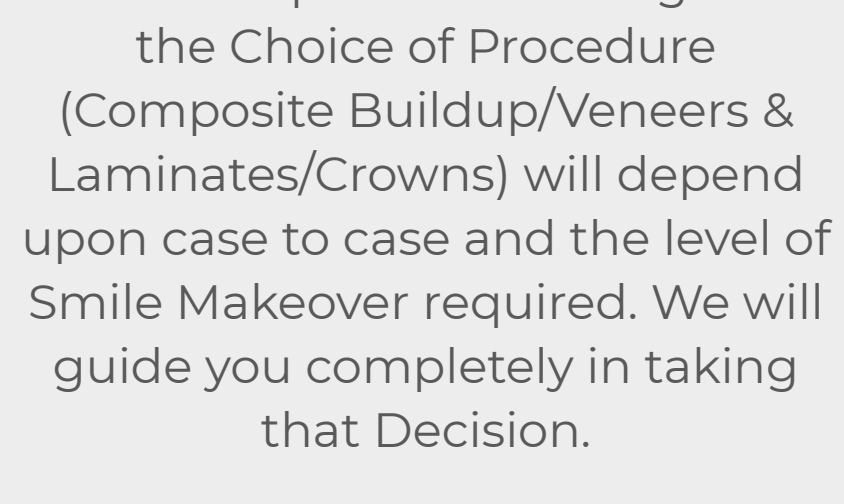

COMPOSITE BUILD UP

It is a Non Invasive Procedure. This Procedure is generally selected when minor correction is needed, such as Filling Minor Gaps between the Teeth & Restoration of Fractured where we add Tooth Colored Filling Material (Composite) for Closing the Gaps according to the Digitally Planned Smile Makeover.

2

VENEERS & LAMINATES

It is a Minimally Invasive Procedure. In this procedure we prepare the Front Region of the Teeth minimally and we take a Digital Measurement, which is sent to the lab. A Layer of ceramic is made in the lab according to the Digitally Planned Smile Makeover which is then bonded to the Patient's Teeth.

3

DENTAL CROWNS

It is an Invasive Procedure, done when extensive Correction is needed. After performing RCT, we do Crown Preparation & take Digital Measurement which is sent to the Lab, where they make Crowns over it According to the Digitally Planned Smile Makeover. These Crowns are then Bonded to the Patient's Teeth.

The Implementation of Smile Makeover procedure along with the Choice of Procedure (Composite Buildup/Veneers & Laminates/Crowns) will depend upon case to case and the level of Smile Makeover required. We will guide you completely in taking that Decision.
